Rapid Risk Assessment

National Training of Trainers for

COVID-19

6 March 2020 | New Delhi
Content

1. Definition and rationale for Rapid Risk Assessment (RRA)
2. Risk assessment methods, tools and process
3. Risk assessment components, risk matrix
4. Risk assessment outputs
5. Examples of risk questions for India
Risk = likelihood and consequences
Definition and rationale for RRA

What is risk assessment?
A systematic process for gathering, assessing and documenting information to assign a level of risk

Why to conduct risk assessment?

• Characterize the risk (low-moderate-high-very high)
• Support and direct decision-making
• Implement appropriate and timely control measures
• Support effective operational and risk communication
• Improve preparedness
Risk assessment methods, tools and process
SMART goals: simple, measurable, achievable, relevant and time-bound

• Minimum number of methods for common understanding
• Simple but not simplistic
• Appropriate to the people undertaking the risk assessment
• Appropriate to the timeframe required for action
• Examples of methods/tools for acute public health events.
Rapid Risk Assessment Process

• Assembling Risk Assessment team (multidisciplinary team)
• Formulating risk questions
• Undertaking Risk Assessment (components)
  1. Assess hazard/threat
  2. Assess exposure(s)
  3. Assess context (vulnerabilities and threat-specific factors that increase or decrease risk)
• Assigning level of risk.
Risk assessment components, risk matrix
Risk assessment components

Hazard/threat
- Hazard can be known or unknown
- If unknown, prioritise potential hazards (biological, chemical, physical and radionuclear hazards)

Exposure
- Number of people likely to have been exposed
- Number of people exposed likely to be affected

Context (capacity and control)
- Factors associated with social, health status, behaviour (population density and movement)
- Factors associated with health system (Surveillance, diagnosis, treatment)
- Context (political, conflict, economical)

Documented evidence
## Risk assessment – characterizing risk

<table>
<thead>
<tr>
<th>Risk level</th>
<th>Level of management to be undertaken</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Green</strong></td>
<td>Low</td>
</tr>
<tr>
<td></td>
<td>Manage through routine procedures.</td>
</tr>
<tr>
<td><strong>Yellow</strong></td>
<td>Moderate</td>
</tr>
<tr>
<td></td>
<td>Routine procedures may not be sufficient. Management responsibility must be specified; specific monitoring or procedures required.</td>
</tr>
<tr>
<td><strong>Orange</strong></td>
<td>High</td>
</tr>
<tr>
<td></td>
<td>Local capacity surpassed requiring next level of management, and perhaps government to assist. Establish command and control structure.</td>
</tr>
<tr>
<td><strong>Red</strong></td>
<td>Very high</td>
</tr>
<tr>
<td></td>
<td>Local capacity overwhelmed requiring highest level of management and government to assist (perhaps international). Activate Emergency Operations Centre (EOC).</td>
</tr>
</tbody>
</table>
Outputs of risk assessment
Risk statement and limitations of RRA

Risk statement
• Make a concise statement about the level of risk and give evidence-based reasons using key information on likelihood of the event occurring and the impact the event will have

Limitations
• Make a brief statement about limitations of the risk assessment
• These limitations should be documented as they will also assist in decisions and follow-up actions

Recommendations
• Communicate timely and regularly
• Acknowledge uncertainty
• Understand stakeholders’ perceptions
• Translate science into non-expert language
Limitations and level of confidence

Incomplete information can lead to low confidence in the outcome

*BUT*

*decisions for intervention still have to be made*

- As data improves confidence increases
- At all stages of an event the most reliable data available should be used and key limitations should be documented
- This is a cyclical process
Examples of risk questions for India
In scenario of first cases and clusters

• What is the risk of infection for Indian citizens travelling in areas with/without ongoing community transmission?

• What is the risk of introduction of COVID-19 in state X?

• What is the risk of health care associated transmission?

• What is the risk of clusters associated with COVID-19 occurring in other states of India in the coming weeks?
In scenario of community transmission

• What is the risk associated with COVID-19 infection for people in state/city X?

• What is the risk of widespread and sustained transmission in India in the coming weeks?

• What is the risk for healthcare systems capacity in India in the coming weeks?

• What is the risk of severe impact on the Indian society?
Key messages

Risk assessment:
1. Supports defensible and proportional decision making, especially where information is limited and the level of uncertainty high
2. Is a continuous process – should occur many times during an event
3. Helps to predict, plan and understand what levels of risk to accept
4. Helps communicate levels of risk and rationale for decision making to a technical and wider audience
Thank you
